FCC reject the NAB's petition 04-160.!!!!

I thought America was about democracy, freedom of choice, freedom of competition!
Dont pass this bill.

Satellite radio is by far the most exciting improvement to the airwaves since FM. I use the instant Traffic and weather report regularly. Why should I (a US Citizen, taxpayer and voter) be forced to wade through 10-20 minutes of analog station promoting commercials, just for the privilege of accurate and readily available information, like local traffic and weather? These analog stations would rather the government force listeners to use the local analog stations for news, traffic and weather when in fact someone has developed and offers a much much better "mousetrap". I choose to willingly pay for satellite radio and urge anyone to vote against this proposition and vote against any politician that supports it. Dont stifle innovation! We all ready went through this once with satellite TV, dont make that costly mistake again.

Sincerely.
Jon Liebers
